Assay descriptions and notes

Panel P0020: Feline respiratory PCR panel -- qualitative detection and differentiation of 6 clinically important feline respiratory pathogens: *Bordetella bronchiseptica*, *Chlamydia psittaci*, feline calicivirus (FCV), feline herpesvirus 1 (FHV-1; also known as feline rhinotracheitis virus), influenza and *Mycoplasma felis* by PCR.

Zoologix has verified the performance characteristics of these tests. However, diagnosis and management of the animal patient should not rely solely upon the results of these tests, as unusual genetic variations of the pathogen can affect results. Correlation with other clinical data is recommended. Specimens will be held for six months by Zoologix to facilitate followup testing, after which time specimens will be disposed of at the discretion of Zoologix unless otherwise directed by client.
